

Care and Maintenance

- Household liquid cleaner and water works wonders. Most liquid non-abrasive bathroom cleaners work well. Use with soft cloth. Do not use abrasive cleaners. They will dull the high gloss. Gel-Gloss™ is a one step cleaner and polish formulated for cultured marble products. It can be obtained online and at most hardware or plumbing stores. To restore high gloss, use a mild polishing compound and buffer such as Gel-Gloss™. Do not use steel wool, scouring pads, scrapers, or sandpaper on any part of the surfaces.
- Limit water temperature to 125 degrees Fahrenheit.
- Do not pour in drain or set on top, chemicals such as nail polish remover or corrosive chemicals.
- Some decorative containers can cause discoloration if left on top for an extended period of time.
- To remove plaster or construction residue, rub the surface slightly with a wooden edge and clean with liquid cleaner. Never use wire brushes or metal tools on any part of the cultured marble surfaces.
- If the stain is from hard water or mineral deposits, try using a cleaner for removing iron, calcium, or other such mineral deposits that are in your water supply. Most cleaning chemicals will not damage the gelcoat as long as product label instructions are followed.
- Minor surface scratches can be buffed out using a mild compound and Gel-Gloss™ as a buffer.
- Chips and deep scratches are generally repairable, but should be done by an experienced professional for best results.
